Heavy Duty Winder

Model Number	Dimensions	Construction
HW238-3-G	Various sizes available	2" Round steel tubing

Heavy Duty Winder bicycle parking racks meet or exceed the specifications of similar serpentine-type stands. In addition, their loop dimensions are calculated to provide sufficient clearance for bicycle handlebars, pedals, and seats – clearances not always available on all serpentine-type racks. The overall height of 42" makes for easier loading of the racks from one or both sides.

The Heavy Duty Winder's massive frame (2-3/8" OD structural steel tubing, 2" Schedule 40 pipe) is suited to the most abusive institutional environment and allows the use of high security "U" locks to secure the frame of the bicycle to the rack. The Heavy Duty Winder racks are available up to 21-bike capacity models for in-ground or surface mounting. They are offered in a galvanized, powder coat, or stainless steel finish.
